

Emotions in language learning

Sachiko Nakamura
Center for English as a Lingua Franca
Tamagawa University

JSLARF Symposium July 1-2, 2023

By the end of
this talk,

You will...

01

be equipped with
pretty decent
knowledge about
emotions

02

understand how
powerful emotions
can be in L2 learning

03

become interested
in integrating
emotional aspects to
your future research

04

think about your
teaching practice
from a different
viewpoint

01

What is this thing
called “emotion”?

Psychological constructionist models

Emotions are mental events that are constructed in the mind of an individual by making internal sensations and external sensations meaningful while reinstating prior experiences that are similar to the present context (Barrett, 2016; Gendron & Barrett, 2009; Hoemann et al., 2019; Lindquist, 2013).

OMG this is scary.

Anxiety

OMG this is awesome!

Excitement

The control-value theory of achievement emotions

Experiencing a discrete emotion is a multifaceted phenomenon involving affective, cognitive, physiological, motivational, and expressive processes (Pekrun, 2006; Pekrun & Stephens, 2012).

in educational psychology

For example?

Experiencing anxiety before giving a presentation

- uneasy feeling (affective)
- worries about what might go wrong (cognitive)
- dry mouth (physiological)
- wishes to run away (motivational)
- nervous smile (expressive)

Emotion Regulation and Strategy Instruction in Learning Sachiko Nakamura (in press)

Book series

Springer Texts in Education

02

L2 emotion research:
How are we doing so
far?

Not too bad.

Not too bad.

Foreign language classroom anxiety

(Horwitz et al. in 1986; MacIntyre & Gregersen, 2012)

Foreign language enjoyment

(Botes et al., 2022; Dewaele & MacIntyre, 2014)

Boredom in L2 classroom

(Nakamura et al., 2021ab; Pawlak et al., 2021)

03

Wouldn't L2 learners experience emotions other than anxiety, enjoyment, and boredom?

Of course,

YES!

Davari et al., 2020; Imai, 2010; Littleton & Nakamura, in preparation; Nakamura, 2018; in press; Sampson, 2018; Shao et al., 2023; Teimouri, 2016, 2018

Littleton & Nakamura (in preparation)

- Small-scale exploratory study investigating the types of emotions and antecedents experienced by six Japanese university students
- During three common classroom activities in English classes
- Questionnaire, observation, & post interview

Emotions experienced by 6 students during three ELF activities

04

Are emotions *that* important in L2 learning?

Absolutely,

YES!

Arnold, 2011; Botes et al., 2022; Dewaele, 2015; Dewaele & MacIntyre, 2014; Dörnyei & Ryan, 2015; MacIntyre & Gregersen, 2012; Nakamura, in press; Nakamura et al., 2022ab; Pawlak et al., 2021)

Akiyama, Nakamura, Uchiyama, & Saito (2023)

- Mixed-method study to examine the L2 speech comprehensibility development of nine L2 Japanese learners (7 from the U.K., 1 from Singapore, 1 from HK) through a task engagement framework
- Paired with L1 Japanese speakers in Japan studying English
- Engaged in topic-based conversations once a week for 10 weeks via Zoom (9 sessions in total)
- Examined 18 engagement variables as predictors of comprehensibility development
- Ran Spearman Rho correlation

Analysis of 18 variables as indicators of engagement

Dimension	Variables	Definitions/Operationalizations
Behavioral	1. Time on task	Length of time the speaker was taking the floor
Cognitive	Asking questions <ol style="list-style-type: none"> 1. To learn about each other's culture 2. For bonding 3. For other purposes 	<ol style="list-style-type: none"> 1. Questions about each other's culture (e.g., "Is it the same in Japan?") 2. Questions asked to get to know each other (e.g., "What's your favorite class?") 3. Other types of questions (e.g., asking about an image)
	4. Self-repair	4. Occasions where the speaker attempts to make changes to what is being said (self-corrections, self-repetitions, self-reformulations, self-replacements, and false starts)
	5. Lexical search	5. Occasions where the speaker verbally indicates he/she is searching for a word (e.g., "What is it called?")
	Negotiation of meaning <ol style="list-style-type: none"> 6. Using TL only 7. Using code-switching 	<ol style="list-style-type: none"> 6. Negotiation of meaning using only the TL 7. Negotiation of meaning that used bilingual resources

Analysis of 18 variables as indicators of engagement

Dimension	Variables	Definitions/Operationalizations
Social	Responsiveness 1. Repetition 2. Peer completion 3. Commenting	Instances where the speaker reacted to the interlocutor by 1. Repeating 2. Completing 3. Commenting on previously expressed ideas (Trofimovich et al., 2021)
	4. Recasts	Reformulation of an erroneous utterances into a more target-like form while preserving the original meaning (Mackey, 1998)
	Linguistic scaffolding 5. Using TL only 6. Using code-switching	Language support provided (1) voluntarily by the L1 speaker even when there is no trouble source or (2) in response to L2 speaker's request for language support
	7. Backchanneling	The response token or turn continuer acknowledging the speaker's utterance (e.g., uh huh, yeah, sure, I see, okay) (Trofimovich et al., 2021)
	8. Overlaps	Simultaneous speech

Analysis of 18 variables as indicators of engagement

Dimension	Variables	Definitions/Operationalizations
Affective	1. Enjoyment	Answer to the question "I enjoyed today's session." on a scale of 1-5 (strongly disagree-strongly agree)
	2. Satisfaction	Answer to the question "I am satisfied with my performance." on a scale of 1-5 (strongly disagree-strongly agree)

Variables that had the strongest correlations with comprehensibility development

1			

Variables that had the strongest correlations with comprehensibility development

	Engagement variable	r	Interpretation
1	(Partner's) Asking cultural questions	.68	The more cultural questions the partner asked, the further comprehensibility developed

Variables that had the strongest correlations with comprehensibility development

	Engagement variable	r	Interpretation
1	(Partner's) Asking cultural questions	.68	The more cultural questions the partner asked, the further comprehensibility developed
2	(L2 learner's) Time on task	.67	The more time the learner took the floor, the further comprehensibility developed

Variables that had the strongest correlations with comprehensibility development

	Engagement variable	r	Interpretation
1	(Partner's) Asking cultural questions	.68	The more cultural questions the partner asked, the further comprehensibility developed
2	(L2 learner's) Time on task	.67	The more time the learner took the floor, the further comprehensibility developed
3	(Partner's) Overlaps	.62	The more overlaps the partner used to show engagement, the further comprehensibility developed

Variables that had the strongest correlations with comprehensibility development

	Engagement variable	r	Interpretation
1	(Partner's) Asking cultural questions	.68	The more cultural questions the partner asked, the further comprehensibility developed
2	(L2 learner's) Time on task	.67	The more time the learner took the floor, the further comprehensibility developed
3	(Partner's) Overlaps	.62	The more overlaps the partner used to show engagement, the further comprehensibility developed
4	(L2 learner's) Enjoyment	.50	The more the L2 learner enjoyed the conversation, the further comprehensibility developed

05

Are all positive emotions good and negative emotions bad for L2 learning?

Not necessarily.

Boekaerts & Pekrun, 2015; Chastain, 1975; Ellis, 2012; Kleinmann, 1997; Nakamura, in press; Pekrun, 2006; Pekrun, et al. 2017 Scovel, 1978

Claims in educational psychology

- **Anger** can generate motivation to exert effort to avoid failure (Boekaerts & Pekrun, 2015).
- **Anxiety** could lead to the promotion of extrinsic motivation and rigorous learning strategy use, which could result in a positive learning outcome in a long term (Pekrun, 2006).
- **Relaxed contentment** resulting from success could hinder immediate motivation to reengage with learning (Pekrun, et al. 2017).

Empirical
evidence?

Vignettes

about emotions and learning

Learners and teachers
of various nationalities

06

How do we best
research emotions?

Ask.

Barrett, 2004

Ample research evidence

Neuroscience & Psychology

Barrett, 2004, 2006; Cacioppo et al.,
2000; Mauss & Robinson, 2009;
Russell et al., 2003

There is no consistent correspondence between emotions and specific peripheral physiological responses.

“As a result, there is no known objective, external measure of the subjective, internal events that we experience as anger, sadness, fear, and so on. If we want to know whether people feel these emotions, we have to ask them.”

—Barrett (2004, p. 266)

07

What can we do with our students'
emotions as teachers?

Emotion regulation strategy instruction

Meta on emotion regulation: Aldao et al., 2010; Naragon-Gainey et al., 2017; Webb et al., 2012;

Meta on strategy instruction: Hassan et al., 2005; Plonsky, 2011

Strategy intervention: Bielak, 2018; Kralova et al, 2017; Mostafavi & Vahdany, 2016; Nakamura et al., 2022b

We can up- and down-regulate our own emotions through the use of emotion regulation strategies.

A mini strategy instruction demonstration

Reappraisal

I don't want to talk about my personal stuff at a conference.

I don't know the person sitting next to me.

That person looks kind of unfriendly.

What is this crazy woman talking about??

What if this person talks about something super dramatic!?

Appraisal

Anxiety

I don't want to talk about my personal stuff at a conference

I don't

Dissapointment

Anger

Person looks kind of friendly,

Worry

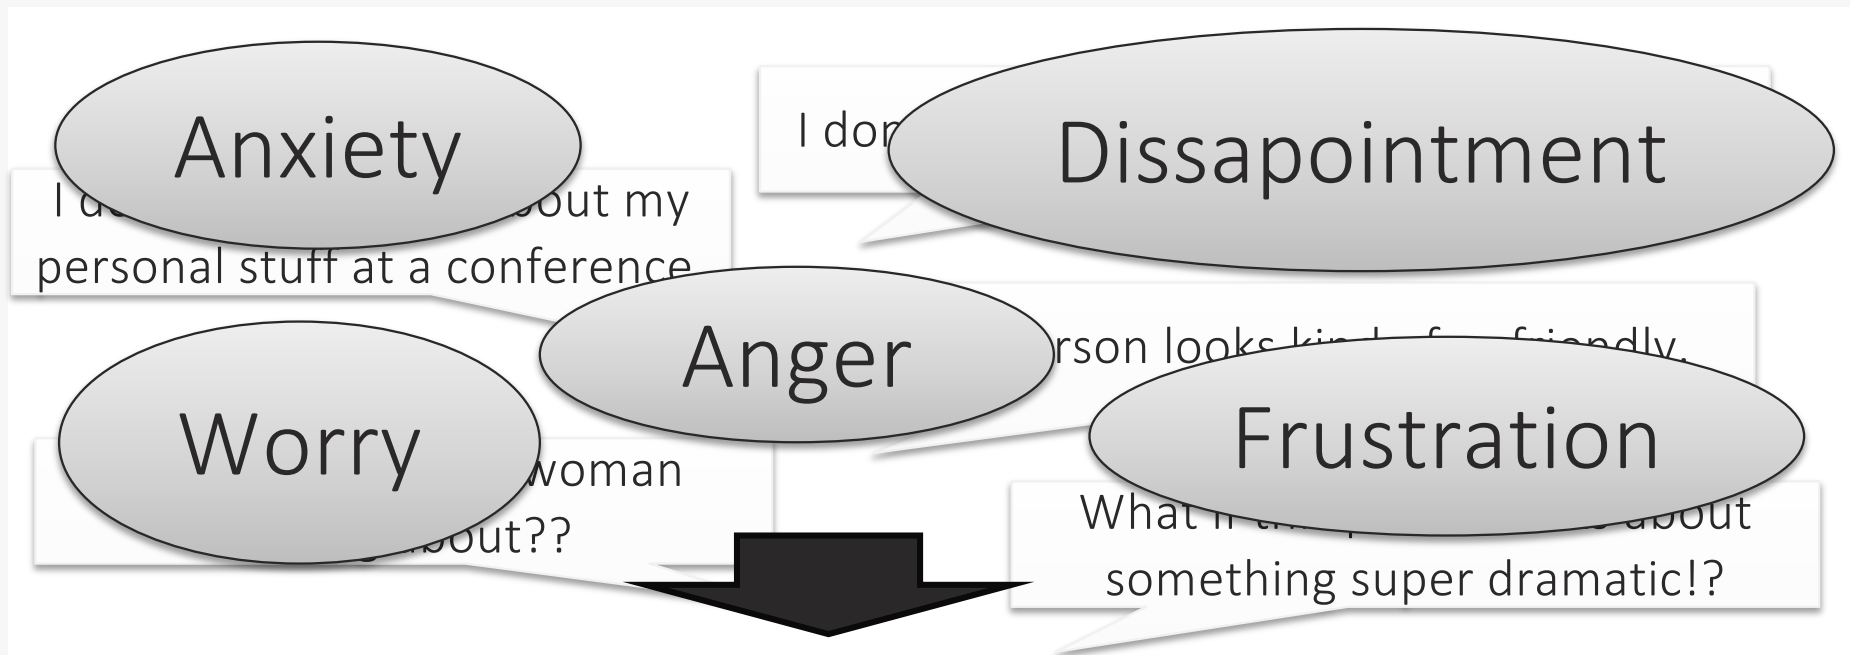

Woman about??

Frustration

What if she says something super dramatic!?

Appraisal

- Disengagement (or semi-engagement) from the activity
- Missing the opportunities to learn something great

I don't want to talk about my personal stuff at a conference.

I don't know the person sitting next to me.

That person looks kind of unfriendly.

What is this crazy woman talking about??

What if this person talks about something super dramatic!?

REappraisal

I don't want to talk about my personal stuff at a conference, so let me enjoy what others would say 😊

I don't know the person sitting next to me.

That person looks kind of unfriendly.

What is this crazy woman talking about??

What if this person talks about something super dramatic!?

REappraisal

I don't want to talk about my personal stuff at a conference, but let me enjoy what others would say 😊

What is this crazy woman talking about? –something groundbreaking?

I don't know the person sitting next to me.

Emotion regulation = learners' capacity to understand their own emotions, use emotions as a source of energy, as well as modify or temper aspects of the emotional experience when they interfere with the pursuit of important goals (Boekaerts, 2011; Boekaerts & Pekrun, 2015)
